Transforming the way you work

Authority 7

Enabling Digital Transformation
for Local Government

"It is clear that, whatever else happens during the next decade, the Council of 2025 will be asked to meet the changing needs and increasing demands of its local residents with fewer resources to support community services and infrastructure renewal and development."

The Changing Landscape for Local Government in Australia and New Zealand – Civica in collaboration with UTS

Authority 7

The landscape for local government is constantly changing. Local authorities are expected to "do more with less" for their communities and citizens, while managing ever changing legislative demands.

Authority 7 is the first release of the future of eCitizen centric services. With a newly designed, modern and responsive portal for staff and the community - Authority 7 brings a range of reporting, productivity and performance benefits to local authorities and their citizens.

Authority is built on a corporate enterprise information system approach, specifically designed for local governments. It provides 'a single source of truth' for data and our integration layer eliminates double entry of data and drives efficiencies for users.
