Civica

Transforming the way you work

Spydus
Integrated Library Management System

Spydus10 is the perfect combination of traditional integrated library management with the unique features of a discovery OPAC, which includes reader recommendations, digital asset management and cultural and local history collections. Spydus10 also comprises integrated modules for business analytics, event management and streamlined digital content.

Reduce risk, reduce overheads with the cloud advantage

Civica can help you safely take advantage of the cloud whilst transforming your IT security and performance. Our fully managed offering means that you can be confident that your critical data and applications are kept up-to-date, secure and protected at all times.

100% web based and mobile ready

Spydus10 has been designed with mobility first in mind to provide an optimal viewing experience with easy reading and navigation. It enables staff members and library customers to have full access from any web enabled device.

Designed in Australia, exported to the world

With a 30 year pedigree, Spydus development originates in Australia, with contributions from our Civica teams worldwide including Singapore and the UK.

Our team of software developers, technical and service desk staff and trainers are experienced in and understand the needs of libraries. They can provide the expertise and delivery know-how to help you deliver best practice library services to your community.

Established consortia model

Spydus10 is flexible and scalable to suit small single institutions and consortia of any size. Our customers worldwide include education libraries, public libraries, national libraries and special libraries. Our approach to consortia is that libraries can have the option to maintain their unique identities yet be part of a wider shared service.

# Offering more than standard features

In addition to providing the standard features expected of a library management system, Spydus offers a wide range of unique modules and features, both core and additional.

Seamless integration with digital content

We know that users want simple access to digital content. Spydus provides interfaces for seamless access to third party content which allows students to search, borrow and reserve items within the same interface. Wheelers, Overdrive, cloudLibrary, Bolinda BorrowBox, Axis 360, RBdigital, and RBdigital Magazines resources are currently available.

Spydus also manages the storage, access and loan policies of your library's own digital assets, which could include databases, websites, the school's own digital content and more.

Seamless access to digital content

The customisable Spydus OPAC makes it simple to promote recommended reading lists, featured collections, and new titles.

Archives and cultural collections

Spydus Archives has been designed to support the rich historical collections that many organisations possess. It allows the full value of your cultural collections to be easily realised and managed. Our Archives module follows international archiving standards.
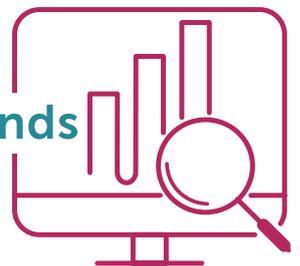

Event management

Spydus Event Management provides all the tools for library staff to manage and promote events, take bookings and payments and track progress for all library events.

Business intelligence

Our analytics suite offers an integrated approach to business intelligence, which focuses on empowering library decision makers with the ability to access, understand and act on fact-based insight. SpydusManager, SpydusCollections and SpydusAnalytics offer a richer view of data and trends in your library including managing your collections.

With collaborative features, automated reports and personalised dashboards, Spydus makes for better library decisions.

Richer view of data and trends in your library
